design. build. green.

Rodwin Architecture and Skycastle Construction (RA/SC) is an award-winning, design-build firm based in Boulder, Colorado. Led by company president Scott Rodwin, AIA, LEED AP, and vice president Brandon David, LEED AP, RA/SC is celebrating 20 years of extraordinary custom homes. "Our goal is to make the process of creating a custom home easy and enjoyable by providing turnkey architecture, interior design and construction services," Rodwin says. The firm's portfolio spans Colorado, showcasing a wide variety of styles that respond to the tastes of each individual client. Known for design excellence, quality construction and service that is friendly, responsive and honest, it's no wonder RA/SC has built such a positive reputation.

MAIN Located on one of Colorado's oldest homesteads, this nearly Net-Zero Energy, passive solar house features walls of glass, a massive deck and an incredible connection to the landscape. Set at an elevation of 9,000 feet, it had to be built robustly to withstand the elements. **TOP** This 3,000-square-foot warm modern home is certified LEED Platinum and is nearly a Net-Zero Energy building. It boasts a passive solar design and expansive views, for the best of indoor-outdoor living. **BOTTOM** Rodwin, David and team took a dilapidated 1980s house and transformed it into a modern, passive solar home that captures amazing mountain views and is surrounded by decks from which to view them. Rich, low-maintenance materials were used throughout the 4,200-square-foot gut remodel and addition.

"WE DESIGN AND BUILD TESLAS."

At RA/SC, sustainable design has been a fundamental tenet since its inception. "A deep green home doesn't have to compromise on beauty or functionality," says Rodwin, as evidenced by the gorgeous LEED Platinum and Net-Zero Energy homes on its website. Their homes also provide clients with excellent indoor-air quality, low water bills and durable, high-quality finishes. "At the end of the day, we earn our client's trust by making the entire process seamless and fun, from the design vision to the day we hand them the key," adds David.
